

Sophos Email

Protect your email infrastructure with the only MDR-optimized email security solution

Sophos Email is a comprehensive email security solution that defends against phishing and BEC attacks, enhances existing email investments, and provides unmatched visibility and control to Sophos XDR and Sophos MDR.

Use cases

1 | STOP ATTACKS TARGETING YOUR EMPLOYEES' INBOXES

Desired outcome: Detect and stop phishing and business email compromise (BEC) attacks.

Solution: Phishing and BEC attacks take advantage of the human element, fooling legitimate users into engaging with malicious emails. Leveraging natural language processing (NLP) analysis of message content, sender authentication (SPF, DKIM and DMARC), URL protection, and cloud sandboxing, Sophos Email blocks attacks before they enter a user's inbox.

2 | ENHANCE EXISTING EMAIL INVESTMENTS

Desired outcome: Add additional layers of email security on top of Microsoft 365 and Google Workspace.

Solution: Sophos Email enhances M365 and GWP to create superior cybersecurity outcomes with additional security capabilities, including policy smart banners, policy sender authentication, clawback capabilities, and easy end-user quarantine. Additional admin-friendly benefits include automated Mail Flow integration, interactive reporting, and simple policy configuration.

3 | HUMAN-LED RESPONSE TO CRITICAL EMAIL EVENTS

Desired outcome: Enable Sophos MDR analysts to immediately respond to critical security events.

Solution: Sophos Email uniquely provides Sophos MDR with the controls needed to execute a decisive response to an attack in real-time. Whether manually clawing back malicious messages, blocking malicious senders/domains/IPs, or modifying policies and other configurations, Sophos Email enables Sophos MDR to ensure superior cybersecurity outcomes.

4 | INCREASE VISIBILITY TO STOP EMAIL THREATS QUICKLY

Desired outcome: Increase visibility across your security ecosystem to rapidly respond to advanced threats.

Solution: Visibility into email-related security threats and the ability to act upon them with speed is essential. Sophos XDR ingests email security events from Sophos Email, including account compromise attempts, data control, post-delivery protection events, and more. Your security analysts, or the Sophos MDR team, can use Sophos XDR to take email-related actions to stop threats fast.

Peer recognition

Sophos Email named a Product Leader, Market Leader, and Market Champion by KuppingerCole Analysts AG in the Leadership Compass for Email Security

Sophos Email achieved a perfect malware catch rate and had zero false positives in the Q2 2025 VBSpam test

Sophos Named a 2024 Gartner® Peer Insights™ Customers' Choice for Managed Detection and Response
